

# Plant Historian AM

## Alarm Management System

The MES software Plant Historian AM – alarm management – is a company-wide usable, central solution for long-term archiving and analysis according to ISA 18.2, NAMUR NA 102 and EEMUA 191. Comprehensive analysis functions are the basis of a structured procedure for alarm reduction and plant optimization. Sustainable alarm management means work relief for the plant staff and is a contribution to plant safety and security.

Systematic alarm management on the basis of Plant Historian AM – alarm management – is an ideal MES solution for both smaller and bigger enterprises. A company-wide use with more than 300 servers can be realized without any problem.

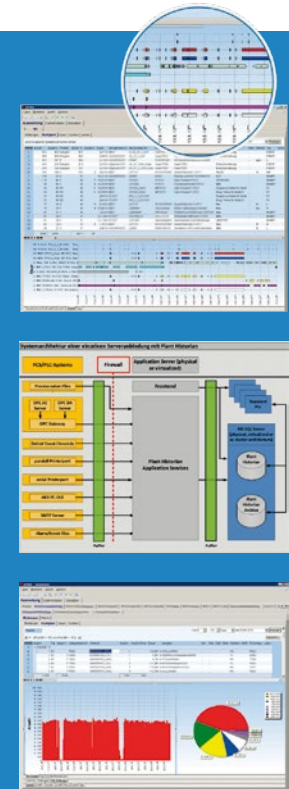

- Standardized PCS/PLC interfaces
- PCS independence
- Connection via OPC, printer interface of any control system/control, e.g. Siemens, Emerson, Honeywell, ABB, Foxboro
- Optimized memory and runtime, long-term archiving of alarms & events, operator interventions and batch protocols
- Central SQL database and central application server
- Scalable, intuitive system
- Central infrastructure

### Benefits

- Increased plant security
  - Shorter response times as a result of alarming per SMS, email or phone
  - Support of the plant staff with linked procedural instructions
- Support for alarm reduction
- Reduced workload for the plant staff
- Detection of deficient measuring components and trouble causes
- Benchmarking according to ISA 18.2, NAMUR NA 102 and EEMUA 191
- Identification of bad procedures
- Feedback of practised alarm management
- Company-wide applicable, central solution, no client installation required
- Central infrastructure: reduced hardware, maintenance and support costs
- Short implementation period, reduced introduction/configuration effort
- Intuitive user interface adapted to user groups, reduced training expense
- Connection to any PCS/PLC system
- Optimization approaches can be identified early and recurrently and can be realized sustainably

### Functions

- A&E overview with linked procedural instructions
- Monitoring and evaluation of the alarm and event duration and action triggering (SMS, email, phone call)
- KPI reporting according to ISA 18.2, NAMUR NA 102 and EEMUA 191 (follow-up and fluttering alarm, average alarm rate per operator)
- Direct alarm and event forwarding per SMS, email, phone
- Automated KPI reports or event-related trouble reports
- Indication of different PCS/PLC connections on a central A&E monitor
- Visualization of incoming/past alarms
- Column related grouping, sorting and filtering functions for A&Es
- Analysis/filter settings for alarms & events for the respective user profile

# Plant Historian

## Modular Software Suite

Over many years, the MES software series Plant Historian has been applied in international industrial enterprises in different countries in Europe, Asia and South America. Best practice has been the key for continuous development and improvement of Plant Historian.

The system can be connected to any kind of PCS/PLC/ERP system. Optimization potential can be early and continuously recognized and sustainably realized.

## Benefits

- Company-wide central solution for the analysis and storage of process data
- Increased plant safety and availability (OEE)
- PCS independent, central infrastructure
- Identification of bad operation processes
- Cost saving concerning hardware, software licenses, service and support costs
- Predictive Maintenance
- Golden Batch Analysis, recognition of production patterns

## Technologies

- Standardized PCS/PLC/ERP interfaces
- Independence of process control system
- Connection via OPC, printer interface of any control system/controls e.g. of Siemens, Emerson, Honeywell, ABB, Foxboro
- Long-term archiving – with optimized memory and runtime – of A&Es, operator interventions and batch protocols
- Central SQL database, central application server
- Scalable, intuitive system

	Plant Historian AM	Plant Historian AR	Plant Historian PDA	Plant Historian DIG	Plant Historian RM	Plant Historian EM	Plant Historian MDE	Plant Historian OEE	Plant Historian HMI	Plant Historian SB	Plant Historian PM	Plant Historian PPS	Plant Historian PTT
	Alarm management for increased plant security	Alarm rationalization for increased plant safety	Process data archiving: recording, analysis and storage	Digital data recording	Reporting and report management	Energy controlling and monitoring according to ISO 50001	Machine data acquisition	Overall equipment effectiveness	Visualization of manufacturing/production processes	Digital shift book	Predictive Maintenance	Production planning scheduling	Traceability of process data
